Angular 5-8, TypeScript, RxJS, HTML, SCSS, Firebase Cloud Messaging, Firebase Cloud Functions, Twilio

PricewaterhouseCoopers GmbH WPG
Sara Jansen
Friedrich-Ebert-Anlage 35-37
60327 Frankfurt am Main

Dear Mrs. Jansen,

Please allow me to show my deep interest in applying for the position of the Senior Software Frontend Engineer (Jobcode: E-101157) within the PwC Experience Center and my desire to be considered as a prospective candidate.

My first intention is not only to become a part of the team but to be able to contribute to the projects and success of the Experience Center and PwC's clients. Within the last years I have gained a lot of new and highly demanded skills not only in software development and software architecture, but also in creating outstanding user experiences across multiple devices. I follow high quality standards in the software code and the technical documentation I create which lead to market ready digital products that can be efficiently operated. I have multiple years of experience in building up and leading development teams and mentoring team members, as well as in maintaining and continuously improving coding guidelines and methodologies. I share my knowledge and expertise during code reviews, peer programming and in self-organized trainings for colleagues and clients. I have strong communication skills and I am on a daily basis in contact with international clients. I believe that constant effective communication and ability to give forecasts on the possible outcomes is very important for developers skills improvement and I consider I was able to master these two things and used them on my projects all the time.

I know how important timely delivery of project results is and especially how visible progress is in the area of frontend development. I can not only work under high time pressure, I can also organize a team to work efficient as well and show responsibility and commitment. I am sure that each developer in a project can not be considered as a separate unit and I always motivate my teammates to work collaboratively and supportively.

Speaking about planning and structuring my work, I like to work with integrated source control and project management tools like Gitlab, Jira and Confluence. I am convinced that a team following a clear structure and established practices in agile projects, the chance to deliver qualitative results in time increases at least by 30%. I would love to contribute with all my energy and skills to delivery great project results to clients and PwC to become even more successful in creating valuable and profitable digital products. I hope to get the chance to prove my skills and be considered for an interview.

Yours sincerely,
Oksana Muzychenko
